The design process

Web build HTML CSS

- i want to use a simialer gradient to the card for my background...
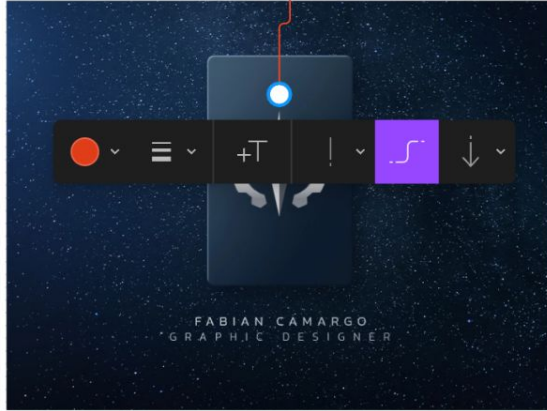

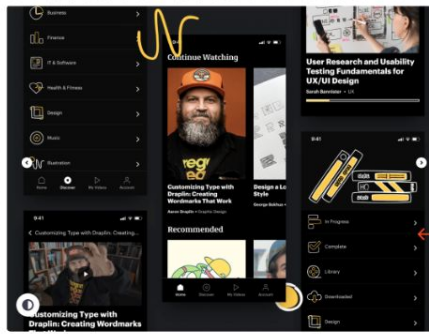

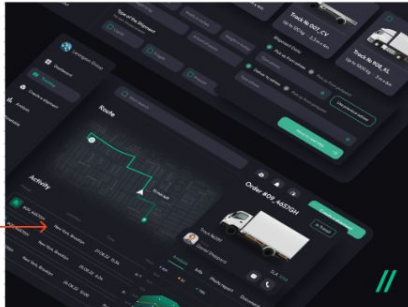

- logo picked from emoji list needed on that was yellow and i liked the look of it ...

- i like the the theme of black and yellow...

FABIAN CAMARGO
GRAPHIC DESIGNER

- the cirlcle white glow around my profile pic

- having just two colurs on a black theme...

- based the colour pallet on the colours in my profile picture and logo to give it a theme that complements the photo and logo...

ABOUT ME

Hi, Mitchell Roger here. I recently enrolled in the Coder Academy web development boot camp course as a student to gain experience and further my skills. Before the coder academy I was a supervisor for a metal roofing and construction company, and during my time there I helped complete projects safely and on time to grow and expand the business. I currently live in Lake Macquarie, and when I'm not busy you can find me learning guitar or listening to music. To check out my resume click here

Created by Mitchell Roger. © 2022

Annotations (left)

- nav bar color #0F2027 the text is white to stand out and when you hover the link the text changes #E3B335 to give feedback to the user

- body background will be a gradient filling up the whole background

- the profile pic is has a border radius to turn it into a circle also has a box shadow to add a white glow to make the image pop

- evryhting in card is vertical to fit evrything in mobile view

- the footercolor is #0F2027 and the text is white the social icons are #E3B335 and when you hover over the icons they grow to give feed back to the user

Annotations (right)

- nava nar is loaded with jqurey to stop me from repeating the code in the other html file, links turn #E3B335 when you hover to give feed back to user

- body has gradient filling up the background

- the main section is a card with info about me and profile pic has a box shadow to give it a glowing effect when you hover the resume link it grows bigger

- the footer has a copyright and created by me and social links that load with jqurey

**SKILL'S & PROJECTS**

KINGS OF WINGS GAME

This is my first personal project that I built with HTML, CSS Python and Flask, kings of wings is a game that combines two of my favourite things eating hot wings and sitting down with a group of mates to have some fun. This project is not fully completed as i am always learning and always looking to improve on the functionality. To check out the source code on github click here.

SKILLS I GAINED FROM BUILDING THIS PROJECT

- Using Python to save user input as a variable to use in a random number generator
- how to create a list and use python to go through the list and choose a random string from the list
- how to display a variable from python in HTML buy using flask
- using flask to render html templates
- How to create a function that counts every time the page gets rendered to act as a round counter to end the game
- how to use heroku to deploy my project

TECH STACK

Created by Mitchell Roger, O 2022

21    8:17:27 PM: Starting post processing
22    8:17:27 PM: Post processing — HTML
23    8:17:27 PM: Finished processing build request in 1.797561594s
24    8:17:27 PM: Post processing — header rules
25    8:17:27 PM: Post processing — redirect rules
26    8:17:28 PM: Post processing done
27    8:17:30 PM: Site is live ✨
```

Deployment

Deployment was done with netlify and was really easy to set up

Link-https://bright-peony-2cc4d9.netlify.app/index.html

Review of development

The experience I had developing my portfolio was incredible. I didn't want to stop creating. It was like I was on an adrenaline rush the whole time; there were times when it was challenging and frustrating, for example, getting the responsiveness to work from mobile to desktop. Still, once you break through and solve the issue, it felt amazing and made me want to find the next problem to solve.
The only ethical issue I ran into was just making sure I used photos from Unsplash.com, as they are free to use
